Attachments: SW_Workshop_data-collectoin questoins(20140731).docx

This is a great summary of the files, Don. I have a few more from/to NOAA on the science and am on the hunt for the map that overlaid land uses and 303(d) impairments. I'll let you know if I find out more.

I also just talked with Gene Foster, the manager of the TMDL program. He said that for TMDLs that have already been done, DMA implementation plans are required to undergo periodic review (usually 5 years). At that time, for any stormwater-related pollutants (esp. bacteria and sediment), DMAs would use the New Development guidance. He said that he could get us something in writing in the next couple of days. So I think one could say that the coverage is in the 90% range just looking at bacteria, sediment, and nutrients listings.

FYI, in the Midcoast, here's a questionnaire used for DMAs re: stormwater. Note that the questionnaire explicitly asks whether the DMAs are using the New Development guidance. None of the cities are subject to MS4 NPDES requirements, but they'll be listed as DMAs in the TMDL.

Subject: Original 1998 language on Oregon's Additional MMs for Forestry and how these MMs were developed

All,

Attached are a couple documents that our managers in particular may find helpful as they review materials from us. Our management has also requested that we include information right up front that presents the actual condition language in our issue-specific documents.

- 1) A subset of NOAA-EPA's 1998 Conditional Approval Findings Document for Oregon with the Additional Management Measures for Forestry highlighted in yellow. The articulation of the condition is very general in the CONDITIONS section, but very specific in the RATIONALE section.
- 2) A "Timeline for Oregon's Additional Management Measures for Forestry and Related Documents" assembled from HQ's paper files.
